THE PROJECT

NutriClime is an educational initiative aimed at promoting healthy nutrition and environmental awareness. Our project focuses on two main deliverables: the e-learning platform and the NutriClime EduGame.

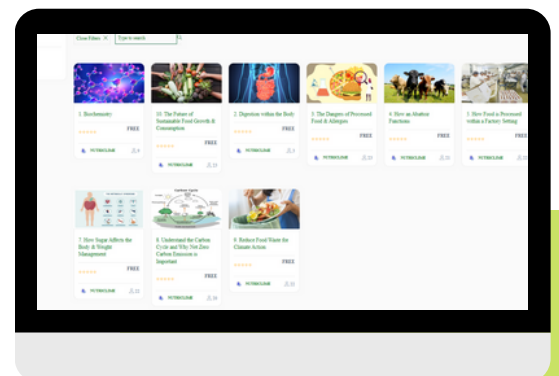

THE IMPACT

The NutriClime project is more than just an educational endeavor; it is a catalyst for social and environmental change. By equipping individuals with the knowledge and skills to make sustainable dietary choices, we can reduce the environmental footprint of food production and promote healthier lifestyles. Moreover, by inspiring future generations to become educators, we are investing in the long-term sustainability of our educational systems and empowering communities to thrive.

NUTRICLIME AR ENHANCED E-MODULES & CPD

We are developing 10 cutting-edge e-modules enhanced with AR technology, covering topics like digestion, food processing dangers, and climate change fundamentals. These modules aim to educate the public on sustainable food systems and combat climate change. They will be freely accessible on our platform for self-learning or integration into lessons.

Our e-platform will host all project deliverables, including the e-modules, and allow stakeholders to access them anytime. Educators can align these modules with curricula to provide interdisciplinary learning experiences. Additionally, CPD titles on climate change and sustainability will be offered to enhance educators' knowledge.

NUTRICLIME EDUGAME

The NutriClima EduGame is a fun and interactive tool that uses the latest UX/UI graphics technology to communicate with users. Through data analytics, the game can measure users' behavior to enhance the effectiveness of the project.

The game will expand potential target groups based on user profiles and promote the importance of plant-based diets and raise awareness of their impact on climate change.

Its going to be available soon.

Stay tuned for more exciting developments from the NutriClima project!

FOLLOW US:

AISR BV (Coordinator), Belgium :

AISR is a private STEM Academy, Teacher Training and Research Institute offering STEM and English education, software development and educational research services.

21.YY Eğitimciler Derneği, Türkiye:

21st Century Educators Association is a Turkish non-governmental organisation, founded by educators and volunteers in 2019, that operates especially in the field of education and training.
